Dear Students,

Please choose one of the two projects available in this folder for your final exam.

To be eligible to take the exam, you must submit your chosen project by the session deadline. Please note that the session deadline refers to the due date for submitting your project solution, not the exam date.

Registration is mandatory in order to sit the exam. After the submission deadline, I will email all registered students at their institutional addresses with the specific exam dates (typically during the week following the project submission deadline).

The exam will consist of two parts:

1. Project Discussion
   You will present and discuss your submitted code.
   Please be prepared to demonstrate executions on the SPM cluster and, if necessary, make small modifications to your code, then recompile and run it again.
2. Oral Examination
   You will answer questions on the topics covered in the course.

For any further clarification or inquiries, please contact the teacher by email.
